ADI Expo 2018 Course Outline

How to Design and Win More Physical Electronic Security Job Bids with Solutions Selling

Session Type/Recommended Format:

• Lecture - Single presenter with a presentation allowing Q & A

Target Audience for Session:

Dealer / Installer / Integrator • Security Consultants

Level of Session Content

· Intermediate - Focuses on application and analysis

Session Length: 2 hours + break

Session Description:

There are proven methods to ensuring that you not only win the job but also actually have your customer ask you to expand its scope based on how you present solutions, not just products, and interact with them. Did you know that by simply following the "rule of three's" you will move your customer's consideration of your bid strictly on price to preference for your approach because it demonstrates how vested you are in his or her job?

Designed for dealers, installers and integrators, this practical, hands-on business development module will ensure attendees are comfortable with the type of technology expertise required to successfully bid jobs and how to apply those technologies into the solutions they actually submit. Session attendees will review real project examples and the step-by-step, common sense process used to design, sell and win more bids.

Learning Objectives:

After completing the session, attendees will be able to:

- Easily identify and recommend the appropriate technology solutions for any job
- Demonstrate to their customer that they are fully educated, understand and are invested in the project they are bidding on
- Clearly communicate and inform their customer about the recommendation and its ramifications
- · Provide their customer with viable solution alternatives to ensure they win the job

Introduction

Instructor will briefly review the class takeaway – a 2-sided Flyer with "Complete Component Considerations" steps to assessing a door on the front and the SDC Door Check List on the backside. In addition, attendees will be given a course handout/copy of the presentation for note-taking.

How to Design and Win More Physical Electronic Security Job Bids with Solutions Selling

Detailed Content Outline:

SDCsecurity.com

Content Points	Flow	Estimated Time	
What is the job bid (RFP) really asking for?	Overview of understanding and being fully vested in the project from the customer's point of view.	15 minutes	
	 Don't just consider the door openings. Back up and look at the entire installation to understand how electronic security is a foundational element of the project. What are potential accessories and options that can help meet the project objective? How to utilize the appropriate door checklist for each door. 		
How to assess the job for more than just code	Rule of Threes: Identify code compliance, risk management and profit potential for every project.	15 minutes	
compliance	 Be more knowledgeable and have more confidence by walking the job. Bring an assistant. Takes notes, photos and use an audio recording 		
	device.3. After the walk-thru, circle back to the bid with new information and more detail.		

PROGRESSIVE

How to identify & recommend the appropriate technology solutions for your bid	Rule of Threes: Purpose, Size and Selecting Components	45 minutes	
	 What purpose must your physical electronic security solution serve? How many doors must your solution address, what is their physical makeup and use? What components are needed to design your solution and their advantages/disadvantages? 	minutes	
	and their advantages/disadvantages? a. Entry Devices: How will I get in? - Stand-Alone Lock, Proximity Reader, Keyswitch, Keypad, Biometric b. Egress Devices: How will I get out? – Push-		
	To-Exit Button, Push Bar, Emergency Release, Motion Sensors, Delayed Egress c. Locking Devices: What locking device will secure the entry point? -		
	Electromagnetic Lock, Electric Strike, Electrified Deadbolt, Electrified Lockset d. Door Access Control: How will the system be controlled? –		
	Power Controller, Door Control Module, Microprocessor-based controller, IP-based door controller e. What other functionality do I need? Timing, tracking/audit, battery backup		
How to prepare viable quote options for any job	Rule of Threes: Always provide the customer with viable A, B and C solutions – Good, Better, Best - to ensure you get the job. If you win it do you want it? Why? Because you'll be married to it and the customer for a full year. It's a relationship and you're providing a solution. Provide in-depth detail:	15 minutes	
	 Each door named & numbered in a plot map. Labor & materials. Summary of Operation (inside, outside) for each door. 		
How to clearly communicate and eliminate confusion	Rule of Threes: Review of real project examples incorporating three winning communication steps:	15 minutes	
	 Stand out – be responsive Educate – take responsibility to ensure the customer is well-informed. Build Trust – let the customer know their job is an ensurther the state of the turn is an ensure the state of the st		
Q&A	opportunity and that you're privileged to provide a quote.	15 minutes	

Call to Action:

- 1. During the session, participants are called to take notes on their copy of the presentation handout and share in a group setting the best practices they have heard that they are likely to apply in their own organization.
- 2. After the session, participants are invited to confidentially submit to SDC examples of job bids for assessment that show how they applied what they learned in the course and to identify areas of improvement.

Takeaways:

- 1. Handout / copy of presentation with note areas on each page and Door Checklist.
- 2. Email address for training class attendees to confidentially submit to SDC examples of job bids via email for evaluation to show how they applied what they learned in the course and to identify areas of improvement free of charge.
