

IP Pro™ Access Control Solution

Single Door DELAYED EGRESS Application

1 Access Control IP Controller

2 Power Supply LISTED 12 and 24VDC Output

3 Wiegand Reader Options (Choose one): Prox Reader or Keypad-Prox Combo

4 Electrified Lock LISTED All-In-One Delayed Egress

5 Power Transfer Device LISTED* (Choose one): Wire Transfer Hinge or Loops

SYSTEM OPERATION

Door is normally closed and secured by a delayed egress panic device.

Authorized Access: No access from the opposite side. Exit only.

Delayed Egress (Unauthorized): Pressing the push pad of the S6000-101 device initiates an irreversible 15 second unlock delay cycle. An audible alarm and yellow status LED inform the person intending to exit of the door release cycle activation. After the delay cycle has expired, the status LED illuminates Red, and power is removed from the locking device, allowing free egress by pressing the push pad.

Authorized Override (Maintained Bypass): The device may be unlocked for an extended period of time by momentarily turning the integral key switch to the Bypass position.

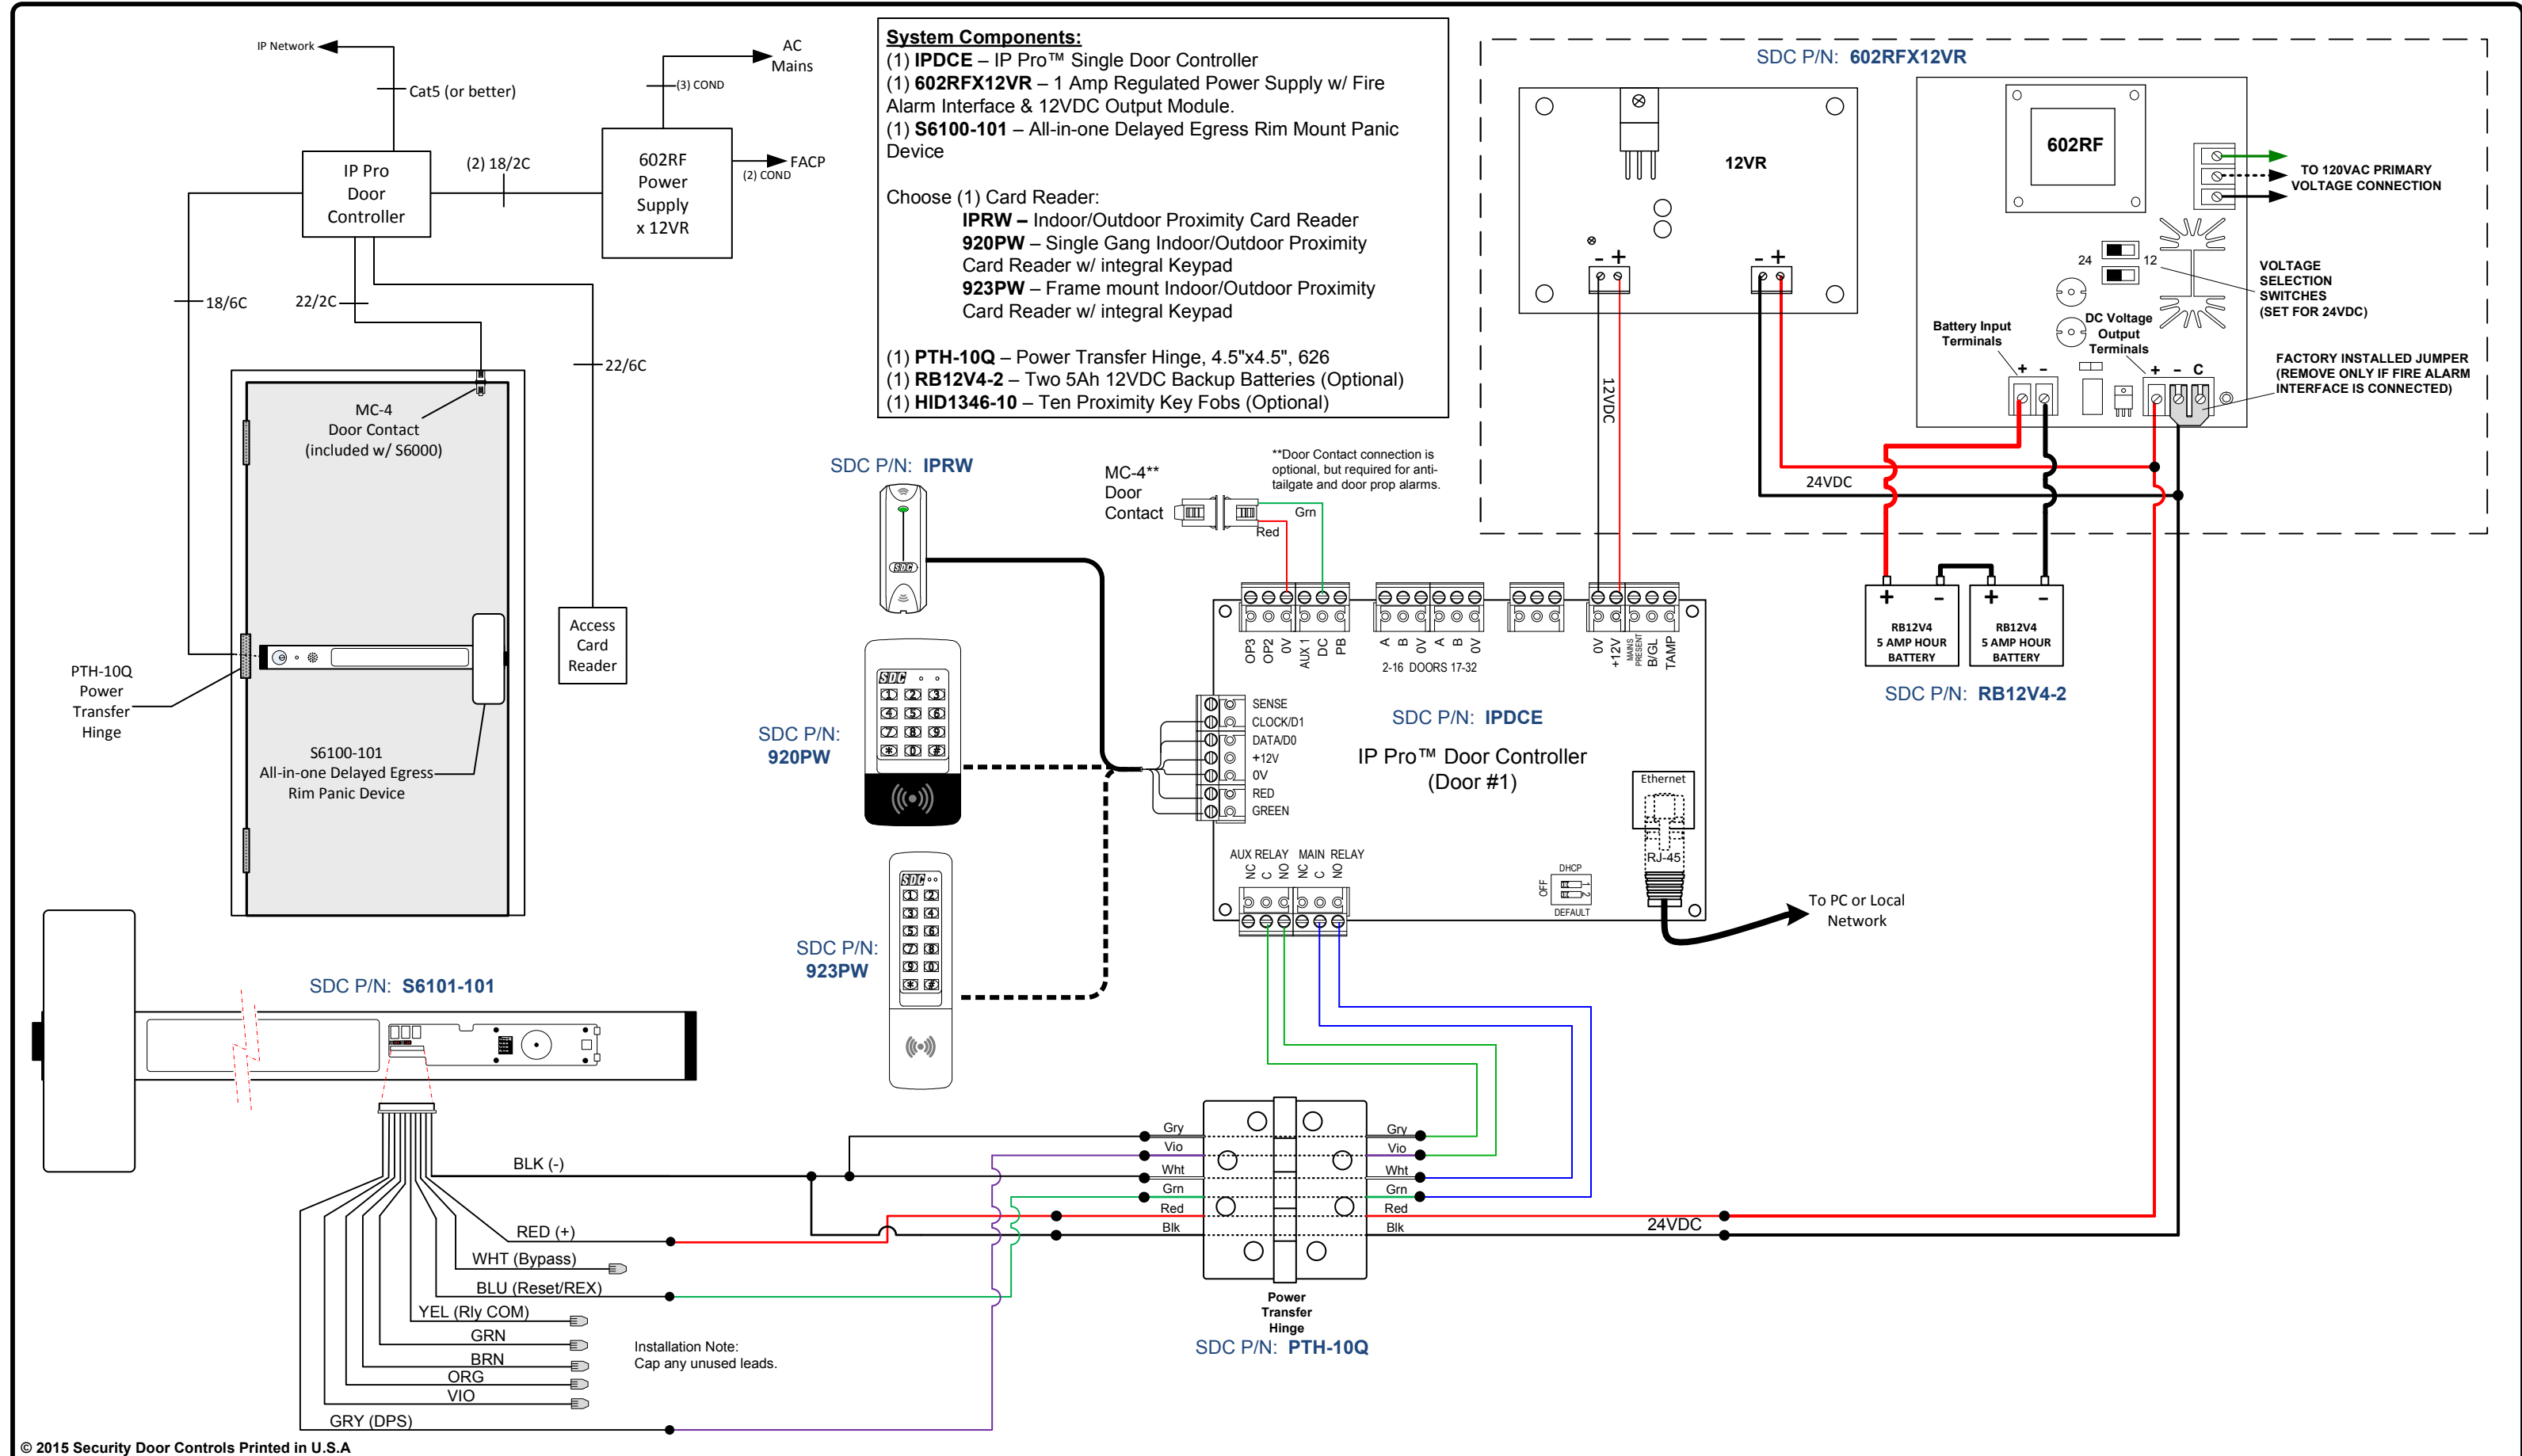

Authorized Egress: A timed Request-to-Exit (REX) cycle is initiated by authorized personnel by momentarily turning the integral key switch to the reset position, or by presenting a valid credential to the card reader. Power will be removed from the locking device allowing free egress by pressing the push pad.

Low Voltage: The system is powered by an SDC regulated & filtered power supply with 12VDC output for access control equipment and 24VDC output for locking hardware to maximize efficiency. Loss of power or a signal from the Fire Alarm Control Panel will unlock the device and allow for immediate egress. The door remains secure from the outside.

IP-based Access Control: User-friendly programming interface via built-in web server, accessible from any networked PC.
