1090 / 1290 Spacesaver®
Bolt Locks

The Spacesaver®, first designed and patented by SDC, is a fundamental innovation in electric locking technology for access control applications.

**FEATURES**

**STAINLESS STEEL BOLT**
Greater security is provided by the 0.625” diameter solid stainless steel bolt. The bolt rotates freely, making attempts to tamper or cut extremely difficult.

**SPECIFICATION GRADE SOLENOID**
All Spacesaver® lock solenoids are manufactured by SDC to precision specifications. SDC solenoids are capable of superior overall performance in both force and longevity, providing years of service compared to commercial grade solenoids.

**CODE COMPLIANT**
Classified in accordance with Uniform Building Code standard 7-2, “Fire Test for Door Assemblies”

**FIELD ADJUSTABLE AUTO-RELOCK SWITCH**
The automatic relock switch keeps the bolt retracted while the door is open. The door depresses the ball switch assembly on closure, causing the bolt to project automatically, locking the door. In addition, the ball switch assembly is bidirectional, permitting the locks to be used on swinging and sliding doors.

The auto relock assembly is field adjustable to compensate for wide door gap. (See Figure 1 & 2 above)

### LOCK FUNCTION

**1091A FAILSAFE**

The 1091A is locked when energized. Recommended for safety applications, it is intended that the door unlock automatically when power is interrupted by the access control, power failure or signal from a fire life safety system.  
- Bolt Throw 0.75"

The 1091ADL is equipped with a deadlocking mechanism that prevents the bolt from being tampered with and pried to unlock. The 1091ADL has all the operational features of the 1091A (above) and is recommended for failsafe applications requiring a higher level of security.

**1291A FAILSECURE**

The 1291A is locked when de-energized and unlocked when energized. Recommended for security applications only, it is intended that the door lock when power is interrupted by a power failure.  
- Bolt Throw 0.625"
